

Concentric Security Interactive Touch Screen Control Systems

Concentric Security Touch Screen Control Systems provide an affordable alternative to traditional hardwired control systems and offer a user interface that is both easy to learn and simple to operate. Touch the screen and be in total control of any security function.

Concentric Security's expert design team custom designs operational screens to interface with one or more Programmable Logic Controllers (PLC). This allows the user to control logic circuits for all of the different security devices. Touch Screen Control Systems can be integrated into new construction or installed in existing facilities to replace or work in conjunction with existing control panels.

The Touch Screen Control System can be programmed to provide event logging for operational or accident investigation and can be configured to provide alarm monitoring and reporting. This monitoring can provide maintenance staff with troubleshooting information and identification of potential future failures.

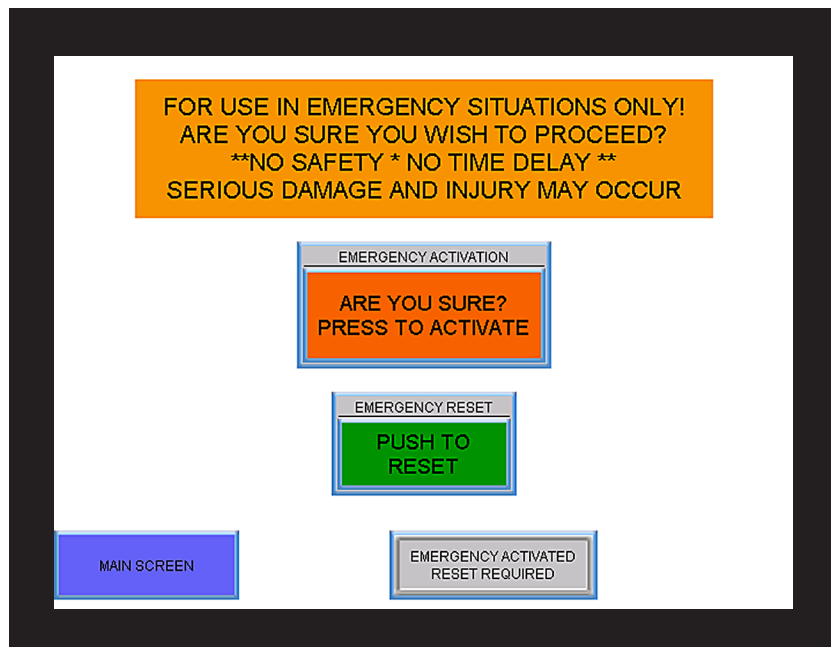

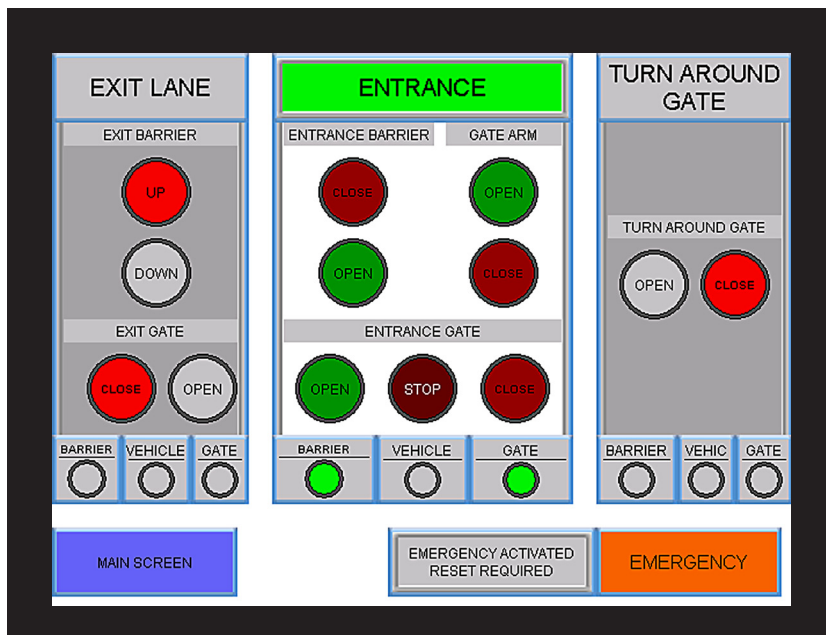

Interactive Touch Screen Offers

- ✓ Easy Adaptability to End User Applications
- ✓ Integrates with PLC Systems Controls of Most Barrier Manufactures
- ✓ Flexible System Configuration and Integration
- ✓ Intuitive, User Friendly Interface that Requires Minimal Operator Training
- ✓ Security Through Password Protection and Master Overrides

Concentric Security Interactive Touch Screen Control Systems

Control And Monitor Multiple Devices

- Barriers
- Gates
- Drop Arms
- Wrong Way Detection
- Over Speed Detection
- License Plate Readers
- Horns and Strobes
- Safety Devices
- Card Access Systems

Technical Specifications

- Built-In 10/100 Base-T Ethernet Network Capability
- 32 Bit RSC CPU
- 32 Mbytes SDRAM of Flash Standard Memory
- Optional USB Pen Drive Memory Expansion
- Fiber Optic and Remote Access Capability
- Up to 999 Different Screens
- LCD Display with 64 Colors
- Operating Temperature 32°-122° F
